

Contrast On-Premises Network Information Worksheet

Acquiring some basic information about the network and working with your network administrator to ensure your server and network are prepared for the installation will greatly reduce the amount of time spent installing and reduce configuration errors.

Basic Server Information

Server IP Address	_____
Server Hostname	_____

SSL Information (Req'd Only if using SSL)

Certificate Alias	_____
Keystore Path	_____
Keystore Password	_____
Truststore Path	_____
Truststore Password	_____

Incoming Network Connections

Service	Default Port	Configured Port	Notes
HTTP	8080		Either HTTP or HTTPS is required, you do not need to use both
HTTPS	8443		Not required if HTTP is configured
AJP	8009		If you are using an AJP Load Balancer in front of your Contrast application server, AJP needs to be configured
Shutdown	8005		Automated scripts can access this port to issue a SHUTDOWN command to the service (no authentication)
Database	13306		If you are installing a standalone Contrast Server this connection will be local-only

Outgoing Network Connections

Service	Destination	Port	Required
Rule / Cache Updates	hub.contrastsecurity.com	443	Optional
Database Server			Only if not local
AD/LDAP Server			Only if using AD or LDAP Authentication
SMTP Server			Only if enabled and not local
